TERM Trimester 4 · 2026-2027

Problem Statement

Fitness centers need a convenient digital experience that brings member registration, fitness activities, schedules, memberships and wellness information together instead of relying heavily on manual assistance.

01

Fragmented services

Members need one place to access essential fitness and wellness services.

02

Manual assistance

Routine activities can require staff support, reducing self-service convenience.

03

Scattered progress data

Workout and activity records should be organized for easier progress monitoring.

04

Limited personalization

Personalized plans and wellness guidance can make the experience more engaging.

Existing System

The abstract identifies the need for a single digital platform because members currently require a more convenient way to manage fitness services and personal wellness information.

KEY LIMITATIONS

- Greater dependence on manual assistance
- Fitness information is not centralized
- Personalized services need a unified digital interface
- Convenient access anytime and anywhere is needed

Proposed System

A smart, user-friendly mobile solution designed to simplify fitness management and enhance the overall wellness experience through centralized self-service.

01

Member Registration

Create and maintain member profiles.

02

Workout Tracking

Record fitness activities and monitor progress.

03

Personalized Plans

Support individualized exercise plans.

04

Class & Trainer Booking

Access schedules and book classes or trainers.

05

Membership Management

Manage membership-related information.

06

Wellness Guidance

Provide organized guidance and notifications.

Objectives

Core goals derived directly from the submitted project abstract.

- 1 Promote member self-service and reduce the need for manual assistance
- 2 Provide convenient access to fitness activities, schedules and memberships
- 3 Support personalized exercise plans and wellness guidance
- 4 Enable class and trainer booking through one digital platform
- 5 Maintain organized profiles and activity records for progress monitoring
- 6 Improve member engagement and support efficient modern customer service

Scope

IN SCOPE

- Member registration and personalized profiles
- Workout and fitness tracking
- Personalized exercise plans
- Class and trainer booking
- Membership management
- Progress monitoring
- Notifications and wellness guidance

OUT OF SCOPE / BOUNDARIES

The submitted abstract does not provide a separate list of excluded features. Therefore, this Review 1 keeps the project boundary limited to the services explicitly described in the abstract. Additional exclusions can be finalized during later design discussions.

TO BE FINALIZED

Technology Identification

React.js

Frontend

Node.js + Express.js

Backend & REST APIs

MySQL

Relational database

Sequelize

ORM

JWT

Authentication

RESTful APIs

Communication

Twilio

SMS / notifications

Docker

Containerisation if required

Basic Architecture

The technology list in the abstract supports a layered design in which the React client communicates with Node.js/Express services, which interact with MySQL through Sequelize and expose RESTful APIs.

PROJECT

Fitness & Wellness Mobile App for Member Self-Service

Abstract Summary

The Fitness & Wellness Mobile App for Member Self-Service is a smart and user-friendly mobile solution that centralizes fitness activities, schedules, memberships and personal wellness information. It supports member registration, workout tracking, personalized exercise plans, class and trainer booking, membership management, progress monitoring, notifications and wellness guidance.

SELF-SERVICE
Members independently manage fitness services

CONVENIENCE
Access essential services anytime and anywhere

PERSONALIZATION
Profiles, plans and activity records support tailored experiences

ENGAGEMENT
Centralized services encourage consistent participation
